

T1V Product Release Notes: October 6th, 2021

ThinkHub 4.11 and ThinkHub Connect 4.11

Google Meet

Google Meet joins the ranks of Skype For Business, Webex, BlueJeans, Microsoft Teams, and Zoom as a natively integrated video conferencing platform within ThinkHub. Accessible in the ThinkHub Menu, users can join an existing Google Meet meeting or create a new Google Meet meeting entirely. Participants will be able to view the ThinkHub Canvas, while in-room ThinkHub users will be able to view remote participants' screens and/or camera feed. Please contact your T1V Territory Manager for pricing.

Customizable “Sticky” Notes

With ThinkHub Sticky Notes, users can create up to six customizable notes that include specific note text, background color, and text color. Users can choose to keep the note text static or allow notes to be editable. ThinkHub Sticky Notes are an effective way to quickly add notes to the Canvas without having to retype often-used text.

Open Session from Idle Screen

ThinkHub now allows users to launch a specified session from the ThinkHub idle screen. Pressing the customizable button will start the session and immediately load the specified saved session saving you the time of having to open it from the menu.

ThinkHub Lockdown

ThinkHub has added an extra layer of security with ThinkHub Lockdown. Enabling the Lockdown toggle will temporarily block features such as T1V app, Canvas email, hardline inputs, and saving, guaranteeing no information from your session can be shared with other users.
