

T1V Product Release Notes: June 14, 2021

ThinkHub 4.10 and ThinkHub Connect 4.10

New SmartGrid Options

Two new ThinkHub SmartGrid containers are now available in standard ThinkHub: 2x1 and 1x2. These SmartGrid layouts enable you to drag and drop content into the grid layout, which will then optimize the content in spacing and alignment. This is a powerful visualization and presentation tool.

TouchControl™ for Dual Hardline Inputs

TouchControl within ThinkHub now allows you to control a computer with two or more monitors as Hardline Inputs by sending mouse events to the connected monitors.

ThinkHub Keyboard: Additional Languages [Swedish and German]

The ThinkHub Keyboard is now available in two additional languages: Swedish and German.

Improved PDF Navigation

ThinkHub now offers improved PDF navigation with the support of PDF links. PDF links will take you to another location in your PDF document simply by clicking on the document link.

ThinkHub Raised Hand

ThinkHub now allows students to virtually raise their hand on connected Student Stations to inform instructors that they want to contribute, have questions, or have completed their work without interrupting the class. Instructors will receive a notification on ThinkHub that a student's hand is raised and then can dismiss the raised hand from the Instructor Station.

ThinkHub Annotation Improvements

ThinkHub now has improved Canvas annotation performance. When drawing or erasing on the Canvas or within an application, there's a noticeable improvement in drawing and erasing performance.

Device Feeds - Pinned to Glass

ThinkHub device feeds now have the option to "pin to glass" allowing you to navigate the Canvas without ever losing sight of the pinned device feed.

Browser Application Label Improvement

The browser application label will now populate the browser's actual label while still allowing you to edit this field.
